MARKETABLE PHOSPHATE ROCK IN JUNE 2012

U.S. marketable phosphate rock production in June was 2.61 million metric tons (Mt), which was 8% lower than that in May and 25% higher than that in June 2011. Total phosphate rock production for January through June was 14.4 Mt, which was 4% higher than that in the same period in 2011.

Phosphate rock used in the United States in June was 2.15 Mt, which was slightly higher than that in May and 3% lower than that in June 2011. Total phosphate rock used in January through June was 13.0 Mt, which was 7% lower than that in the same period in 2011. U.S. producer stocks were 5% higher than those

at the end of May and 10% higher than those at the end of June 2011.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, imports of phosphate rock were estimated based on reported data from Census and other sources.

Estimated apparent consumption, based on annualized data, for 2012 was 29.7 Mt.
