MARKETABLE PHOSPHATE ROCK IN JULY 2012

U.S. marketable phosphate rock production in June was 2.64 million metric tons (Mt), which was slightly more than that in June and 3% more than that in July 2011. Total phosphate rock production for January through July was 17.0 Mt, which was 4% more than that in the same period in 2011.

Phosphate rock used in the United States in July was 2.46 Mt, which was 14% more than that in June and 5% less than that in July 2011. Total phosphate rock used in January through July was 15.5 Mt, which was 7% less than that in the same period in 2011. U.S. producer stocks were slightly less than those at the

end of end of June and 14% more than those at the end of July 2011.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, imports of phosphate rock were estimated based on reported data from Census and PIERS.

Estimated apparent consumption, based on annualized data, for 2012 was 30.1 Mt.
