MARKETABLE PHOSPHATE ROCK IN NOVEMBER 2012

U.S. marketable phosphate rock production in November was 2.46 million metric tons (Mt), which was 5% less than that in October and 6% more than that in November 2011. Total phosphate rock production for January through November was 27.7 Mt, which was 7% more than that in the same period in 2011.

Phosphate rock used in the United States in November was 2.38 Mt, which was 6% more than that in October and 2% more than that in November 2011. Total phosphate rock used in January through November was 24.7 Mt, which was 6% less

than that in the same period in 2011. U.S. producer stocks were 3% more than those at the end of October and 58% more than those at the end of November 2011.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, imports of phosphate rock were estimated based on reported data from Census and PIERS.

Estimated apparent consumption, based on annualized data, for 2012 was 30.0 Mt.
