## MARKETABLE PHOSPHATE ROCK IN FEBRUARY 2016

U.S. marketable phosphate rock production in February was 2.25 million metric tons (Mt), which was 21% higher than that in January and 26% higher than that in February 2015. Total production for January and February was 4.11 Mt, which was 6% higher than that in the same period of 2015.

Phosphate rock used in the United States in February was 2.04 Mt, which was 11% lower than that in January and 2% higher than that in February 2015. Total phosphate rock used in January and February was 4.34 Mt, which was 4% higher than that in the same period of 2015. U.S. producer stocks were 5% higher than those at the end of January and 21% higher than those at the end of February 2015.

Imports of phosphate rock were 110,000 tons, which was 24% lower than those in January and 86% higher than those in

February 2015. Total imports for January and February were 254,000 tons, which was 15% higher than that in same period of 2015. Imports of phosphate rock can vary substantially from month to month based on sales contracts and production schedules of the phosphate plants. Estimated apparent consumption for 2016, using annualized data, was 27.9 Mt, compared with 28.4 Mt in 2015.
