MARKETABLE PHOSPHATE ROCK IN JULY 2003

U.S. marketable phosphate rock production in July increased slightly from June, according to the U.S. Geological Survey (USGS). Annualized production for 2003 was estimated to be 33 million metric tons (Mt), which was 9% lower than in 2002. Production from January to July was down 9% compared with the same period in 2002.

Domestic phosphate rock sold or used in July increased 7% from that in June, to 2.9 Mt. Annualized sales or use for the year was estimated to be 34.3 Mt, which was slightly lower than in 2002. For the period January to July, phosphate rock sales and use were down 2% compared with 2002. U.S. producer ending stocks for July fell by 3% from those in the prior month.

Some phosphate rock import data for Morocco, the largest supplier, were suppressed by the U.S. Census Bureau data. In addition, Census trade data is not available for the current month. Based on Census figures and data from the Moroccan producer, the USGS estimates that imports of phosphate rock in 2002 were 2.7 Mt or an average of 225,000 tons per month.

Domestic consumption for 2003 was estimated to be 37 Mt, using annualized sales and use data and estimated trade data. Apparent domestic consumption for 2002 calculated from the sum of home deliveries and adjusted trade data was 37.4 Mt.

TABLE 1
U.S. PHOSPHATE ROCK STATISTICS, BY REGION¹

(Thousand metric tons)

Period	Marketable production			Sold and/or used			Ending stocks ²		
	Florida and North Carolina	Idaho and Utah	U.S. total	Florida and North Carolina	Idaho and Utah	U.S. total	Florida and North Carolina	Idaho and Utah	U.S. total
