CRUSHED STONE AND SAND AND GRAVEL IN THE THIRD QUARTER 2011

An estimated 348 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the third quarter of 2011, a slight decrease compared with that of the same period of 2010. The estimated production for consumption in the first 9 months of 2011 was 857 Mt, a decrease of 3% compared with the first 9 months of 2010.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the third quarter of 2011 was 271 Mt, an increase of 3% compared with that of the same period of 2010. The estimated production for consumption in the first 9 months of 2011 was 621 Mt, a slight decrease compared with that of the same period of 2010.

An estimated 619 Mt of total *aggregates* was produced and shipped for consumption in the United States in the third quarter of 2011, a very slight increase compared with that of the same period of 2010. The estimated production for consumption in the first 9 months of 2011 was 1.48 billion metric tons (Gt), a slight decrease compared with that of the same period of 2010.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) quarterly sample survey by *crushed stone* and *construction sand and gravel* producers.

The estimated *portland cement* consumption increased 4% in the third quarter of 2011 and increased slightly in the first 9 months of 2011, compared with that of the same periods of 2010. This information is obtained from the USGS monthly survey of U.S. cement producers.

This sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The usual cause behind a large change can be attributed to the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously-reported data are occasionally revised, and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production-for-consumption of *crushed stone* in the third quarter of 2011 increased in four geographic divisions compared with that sold or used in the third quarter of 2010. The largest increases were recorded in the Mountain (6%), Pacific (3%), and the Middle Atlantic (3%) divisions. Production-for-consumption of crushed stone decreased in 25 of the 46 States that were estimated. The five leading States, in descending order of production-for-consumption, were Texas, Pennsylvania, Missouri, Illinois, and Ohio. Their combined total production-for-consumption was 118 Mt and represented 34% of the U.S. total.

The estimated production-for-consumption of *construction sand and gravel* in the third quarter of 2011 increased from the third quarter 2010 levels in seven of the nine geographic divisions. The largest increases in percentages were recorded in the East South Central (11%) and the Pacific (8%) divisions. Production-for-consumption of construction sand and gravel increased in 25 of the 47 States that were estimated. The five leading States, in descending order of production-for-consumption, were California, Texas, Michigan, Minnesota, and Utah. Their combined total production-for-consumption was 92 Mt and represented 34% of the U.S. total.

The estimated production-for-consumption of *aggregates* in the third quarter of 2011 increased in five of the nine geographic divisions compared with that sold or used in the third quarter of 2010. The largest increases in percentages were recorded in the Pacific (6%) and the West North Central (6%) divisions. Production-for-consumption of aggregates increased in 23 of the 45 States that were estimated. The five leading States, in descending order of production-for-consumption, were Texas, California, Pennsylvania, Ohio, and Missouri. Their combined total production-for-consumption was 180 Mt and represented 29% of the U.S. total.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

³Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

⁴State not included in quarterly survey.
